“Tygon-like”
 “Almost Tygon”
 “Tygon-type”
 “Simulates Tygon”
Hogwash!

**There's
 only one Tygon®**

For over a quarter of a century, the name “TYGON” — a registered trademark of Norton Company — has symbolized unsurpassed quality. *There is only one Tygon Tubing, a product of Norton.* Identification of genuine Tygon Tubing is quick, easy and positive—the name “TYGON” and the formulation number is embossed along every foot. Always insist on genuine Tygon Tubing, available at Laboratory Supply houses everywhere.

Biography of Dr. Emmett 13

The Chesapeake Chemist is published monthly September through May by the Maryland Section of the American Chemical Society. Address editorial comments to Dr. William Galetto, McCormick and Co., 204 Wight Ave., Cockeysville, Md. 21030. Phone 666-3155. Address advertising inquiries and plates to Merle I. Eiss, Sinai Hospital of Baltimore, Inc., Belvedere Ave. at Greenspring Ave., Baltimore, Maryland 21215.

BRIDGES THE GAP!

6 7/8" w x 8" d x 10" h

**Sartorius
SERIES 1100**
All Digital Readout
**ONLY
\$425.**

For laboratories that do not require an expensive balance, yet do not want to buy a "cheap," inaccurate one, Series 1100 *bridges the gap!* This new line of Sartorius top loaders offers many features usually found only on more expensive weighing instruments.

There are three models. All are simple to operate, easy to use. There are no weights to manipulate or to be cleaned or calibrated. Mechanical taring is built-in. Readout is digital. Accurate results are obtained *in seconds*.

Since the balances in Series 1100 are of torsion design, no routine maintenance is required. *Ask us for literature.*

SEPTEMBER MEETING

1970 MARYLAND CHEMIST AWARD

DATE AND TIME:

Wednesday, September 16, 1970
at 8:30 P. M.

PLACE:

Eudowood Gardens Lecture Room, Eudowood Plaza, Joppa Road near Goucher Boulevard.

SPEAKER:

Dr. Paul H. Emmett
The Johns Hopkins University.

TOPIC:

"Mechanism Studies on the Synthesis of Hydrocarbons Over Iron Catalysts—and Reminiscences".

COCKTAILS AND DINNER:

Eudowood Gardens Dining Room. Price is \$4.75 per person for cocktails (6:30-7:15, unlimited quantity) and hot buffet dinner (7:15). Students and their spouses may attend the dinner for \$3.00. Reservations are necessary for the dinner, and should be made with Mr. Allen Bednarczyk, McCormick and Co., Inc., 204 Wight Avenue, Cockeysville, Md. 21030, phone 666-3155, 666-3156 no later than September 14. It is not necessary to be a member of the American Chemical Society to attend the dinner or the talks, and the talks may be attended without attending the dinner. You are invited to bring your wife and friends to both the dinner and the meeting.

SOCIAL HOUR:

There will be a social hour after the meeting. Refreshments will be served. All are welcome.

DR. PAUL H. EMMETT

Dr. Emmett is the ninth recipient of the Maryland Chemist Award which was established in 1962 to recognize and honour each year a member of the Maryland Section of the American Chemical Society for outstanding achievement in the field of chemistry. Dr. Emmett, who has been W. R. Grace Professor of Chemistry at Johns Hopkins University since 1955, recently retired from that position.

6th MARM

The 6th Middle Atlantic Regional Meeting will be held in Baltimore on February 3, 4, 5, 1970. Papers are now being solicited for this meeting. Contact Howard Cohen or Leon Weber at 633-6400 for information and details.

Students (and their spouses) may attend the dinner at a charge of \$3.00 each. Prior reservations are necessary.

OCTOBER MEETING "CHEMICAL EDUCATION NIGHT"

See *Chesapeake Chemist* for details

Save time and money with Precision Vacuum Pumps

A comparison of published performance curves will show you how Precision pumps can save you time in pump-down and dollars in pump investment.

You can select the pump that's performance matched to your job — 7 two-stage models, in capacities ranging from 25 to 1500 liters/minute, at prices ranging from \$130 to \$1700. They're quieter, more compact, more efficient, yet less expensive than anything on the market today — easy to service, too — right on the spot.

And they do a better pumping job! You'll find Precision pumps are more efficient at actual working pressures — up to a remarkable 79% at one micron. Guaranteed ultimate vacuum runs to 0.1 micron of mercury — 1×10^{-4} Torr.

Complete performance data on all models available on request.

EXECUTIVE COMMITTEE MINUTES

Minutes of the Executive Committee Meeting of the Maryland Section of the American Chemical Society held on April 22, 1970 at Loyola College.

The meeting was called to order at 8:15 P.M. by the Chairman, Joseph Cogliano. Present were: T. C. Berenthien, W. G. Galetto, D. E. Jones, J. L. Straughn, E. J. Poziomek, F. T. Parr, T. C. Simmons, E. F. Silversmith, Y. H. Caplan, J. Leslie, A. Bednarczyk, J. Scarlett, J. Goldenson, C. E. Minnier, R. J. Kokes, J. J. Kaufman, J. I. Stevens, and H. S. Aaron.

The minutes of the previous meeting were accepted as published in the May 1970 issue of the *Chesapeake Chemist*.

Dr. Leslie announced that Dr. William G. Galetto will be the new Editor of the *Chesapeake Chemist*. Dr. Leslie stated that he will continue to attend to circulation and production matters for the publication.

Dr. Caplan submitted a 1969 Balance Sheet and Profit and Loss Statement for the *Chesapeake Chemist* (attached as an addendum to these minutes), and announced that the publication operated at a net loss of \$1046.41 for 1969. He also stated that some additional funds would be required for operating expenses during 1970. A general discussion of publication costs was held. Dr. Straughn then moved that \$500 be advanced to the *Chesapeake Chemist*, and that a committee be appointed to evaluate the situation and make some policy recommendations with respect to the future publication of the magazine.

Dr. Stevens gave a Treasurer's Report for the period January 1-April 22, 1970, which is attached as an addendum to these minutes. He pointed out that the net cash on hand includes approximately \$4000 that is earmarked for the Scholarship Fund.

Dr. Kokes announced a tentative program schedule for the monthly Section Meetings for 1970-1971. He expects to hold seven dinner meetings at Eudowood Gardens, pending negotiation of a new contract with the caterer.

Dr. Silversmith reported on the

Scholarship Program. Fourteen applications were received out of twenty nominations submitted from the eight high schools that were contacted. A statement on why they wanted to be a chemical technician plus two references were requested of each applicant. The committee selected Wilbur T. Branham and David S. Dixon as recipients of a two year scholarship. Four alternates were also selected, in the event either should decline. Mr. Dixon has already accepted the award. The funds will be disbursed as follows: The Catonsville Community College will bill the Section directly for the tuition (\$250 per student per semester), and the remainder (\$500 each) will be furnished at the rate of \$40/month over a ten month period, plus an extra \$60 and \$40 in September and January, respectively, to defray costs of books and supplies. Payments will be made as long as the students continue to remain in school.

Dr. Scarlett reported on the financial assistance programs that are available at the College. It was suggested that the twelve other finalists be apprised of the fact that such programs might be available to them at the College.

Tim Parr reported that the MARM locations for 1974 and 1977 were still open, and that the MARM Steering Committee was looking to the Maryland Section, as one of the largest sections

6th MARM — CALL FOR PAPERS

General papers in all Divisions are invited for the 6th Middle Atlantic Regional Meeting of the American Chemical Society to be held in the Civic Center, Baltimore, February 3-5, 1971. All papers should be submitted by October 31, 1970 to the Division Chairmen listed below. Information regarding the program may be obtained from Mr. Howard Cohen or Dr. Leon Weber at SCM Corp., 3901 Hawkins Point Road, Baltimore, Maryland 21226. General Chairman for the meeting is Dr. Donald Jones, Western Maryland College, Westminster, Maryland.

In addition to the general papers in each Division many symposia have been planned. These symposia include "Forensic Chemistry and Techniques", "Novel Uses of Waste Material", "High Temperature Inorganic Chemistry", "Inorganic Reactions Involved in Air Pollution", "The Market Segments of the Chemical Industry — Present and Future Prospects", "Recent Progress in the Regulation of Glycogen Metabolism", "Chemical Engineering Kinetics", "Quantum or Theoretical Chemistry", "Applications of Mass Spectrometry to some Biochemical and Medicinal

(Continued on Page 9)

MECHANISM STUDIES ON THE SYNTHESIS OF HYDROCARBONS OVER IRON CATALYSTS

During the period 1945 to about 1965 my colleagues and I devoted a great deal of time to studying the mechanism by which iron catalysts are able to cause carbon monoxide and hydrogen to combine to form a variety of hydrocarbons. The studies include measurements on adsorption, carbide equilibria, gas-solid reaction rates and, finally, detailed mechanism studies with radioactive carbon. These latter were among the first carbon-14 tracer experiments since the carbon-14 became available only after the war in 1945.

Iron is known to react with carbon monoxide to form two carbides, Fe₃C and Fe₅C₆. The study of the thermodynamics of the formation of these carbides dem-

onstrated that they could not be intermediates if considered as bulk phases. For example, the observed formation of ethylene during synthesis is far in excess of that which would be allowed by the reduction of the carbides. Tracer studies confirmed the conclusion that the carbides were not intermediates in the synthesis of hydrocarbons over iron.

The other mechanism that was proposed by early workers suggested the formation of oxygenated compounds as intermediates. Tracer studies using radioactive alcohols, aldehydes, ketones and olefins combined to confirm the importance of and give indications as to the nature of these intermediates.

6th MARM (Continued from Page 8)

Problems", "Advances in Heat-Resistant Polymers", "New Types of Polymerization Reactions", "Polymer Flammability", "Advances in Biopolymers", "Polymer Weatherability", "Inorganic Polymers" in addition to other symposia in the Chemical Documentation, Chemical Education, Technician Affiliate, Organic, and Undergraduate Research Divisions and a tutorial-type program in Spectroscopy conducted by Dr. Leopold May.

An added feature of the meeting will be a Chemical Exposition featuring laboratory instruments, equipment, supplies, and books which will run concurrently with the regional meeting. An announcement of arrangements for a banquet featuring a prominent speaker is expected shortly.

This looks like it is going to be an interesting meeting so participate by submitting you paper now.

..... Tear-Out Dinner Reservation Form

There is enclosed \$..... (\$4.75 per person)* for cocktails and dinner at Eudowood Caterers, Eudowood Plaza, on Wednesday, September 16, 1970 for the following persons.**

May REMSEN MEMORIAL LECTURE

All meetings except in January and May will be held at Eudowood Gardens. Please consult your *Chesapeake Chemist* for details and reservation forms for each meeting.

**VISCOSITY MEASUREMENT
WITH ACCURATE AND
REPRODUCIBLE RESULTS**

**BURRELL
EXTRUSION RHEOMETER
MODEL A-120**

An indispensable tool for studying rheological properties of substances that will flow at room temperature with or without the application of pressure. Burrell Model A-120 is excellent for production control and for determination of fundamental data. Fast and simple manipulation obtains accurate and reproducible results that are independent of the wetting properties of the material under test. Model A-120 is an improvement of the Model A-100 (ASTM D-1823-61 T) and meets or surpasses all previous standards. **Catalog No. 73-851-20 \$360.00**

Viscosity Range... 1 to 1 million Centipoises. Pressure Range... 0 to 100 PSI. A filler tube accessory is available for charging the sample cylinder with materials that do not flow readily at room temperature.

For more information ask your Burrell Representative for Bulletin 335 or contact:

PAUL H. EMMETT

Professor Paul H. Emmett was born in Portland, Oregon on September 22, 1900. He obtained a B.S. degree in Chemical Engineering from Oregon State College and a Ph.D. in Physical Chemistry at the California Institute of Technology. After a year of teaching at Oregon State College, he joined the staff of the Fixed Nitrogen Research Laboratory, U.S. Department of Agriculture, and for eleven years was in charge of the catalytic research work on ammonia synthesis, water-gas conversion, and other processes. During the period 1937-43, he was Professor of Chemical Engineering at The Johns Hopkins University. From August, 1943 to December, 1944, he was employed by the Manhattan Project at Columbia University. In December, 1944, he joined the Mellon Institute on the Petroleum Refining Fellowship to undertake a fundamental research program on the mechanism of catalytic reactions. He remained at the Institute until July, 1955, when he was appointed the W. R. Grace Professor of Chemistry at the Johns Hopkins University. On his retirement from that chair in 1970, an award was created, entitled The Paul H. Emmett Award. This award, administered by the North American Catalysis Society, is to be awarded biannually to investigators anywhere in the world for outstanding fundamental research in the field of catalysis. This signal honor, which recognizes his outstanding contribution, was made possible by the generosity of the Davison Chemical Division of W. R. Grace and Company.

The research work of Dr. Emmett has included studies in gas-solid adsorption, heterogeneous catalysis, and the measurement of heterogeneous gas-solid equilibria and kinetics. In recent years, his catalytic research work has included extensive investigations of the use of isotopes as tracers in studying various catalysts and catalytic reactions. He has been a member of the National Research Council's Committee on Contact Catalysis, an associate editor of the *Journal of the American Chemical Society*, and has edited a seven-volume

treatise on Catalysis. In 1953, Dr. Emmett received the Pittsburgh Award from the Pittsburgh section of the American Chemical Society. He was elected to membership in the National Academy of Science in 1955.

Dr. Emmett received the Spanish Government's highest award for scientific achievement—a medal and an appointment as honorary counselor of the Consejo Superior, Spain's state-sponsored superior Council for Scientific Research. He was given the award in Madrid at a 25-member symposium on catalysis in October, 1964. Earlier on the same European tour, he was awarded the Docteur Honoris Causa degree by the University of Lyon in Lyon, France. Both awards were in recognition of his work on the fundamentals of catalytic reactions. More recently, with former co-workers Brunauer and Teller, he was awarded an honorary degree from Clarkson College of Technology for development of the classic, world-famous BET Theory.

He is a member of the Editorial Board of *Separation Science*, and holds an Honorary membership in Phi Lambda Upsilon. Dr. Emmett was elected Chairman of the Board of the National Catalytic Institute in September, 1965. The same year the Catalysis Club of Metropolitan New York presented him with a life membership, and organized in his honor a catalytic symposium.

EXECUTIVE COMMITTEE MINUTES

(Continued from Page 7)

in the region, to sponsor one of these meetings. After some discussion, Mr. Parr moved that the Maryland Section express an interest in holding the 1977 MARM in Baltimore. The motion was seconded by Dr. Jones. The motion was passed.

Dr. Minnier reported on the student Science Fair to be held at the Civic Center in May. The ACS (National) has provided funds for two \$100 awards to be given to the best chemistry projects, to be selected by the local ACS panel of judges. He reported that he had wanted to obtain the services of some student observers on the panel, to provide peer evaluation, and to assist with the tallying. However, Science Service, organizers of the Fair, would not permit any students on the floor during the judging, even as non-voting observers. After some discussion, Dr. Minnier moved that the Executive Committee of the Maryland Section register a protest to Science Service in objection to the fact that the ACS was not allowed to constitute their judges panel according to their own discretion. The motion was seconded and passed.

Dr. Joyce Kaufman gave a Councilor's Report from the National Meeting at Houston, Texas. She reported that a motion to give chemical technicians full membership privileges was defeated. She also reported on discussions on chemists in the labor market, including a possible portable pension plan for the industry. She recommended that for future meetings, the National ACS executive committee agenda be discussed by the local

executive committee and/or the councilor representatives in order to formulate a consensus of views for voting purposes.

Dr. Jones reported on plans for the Sixth MARM program. He stated that any strong interest in having any given symposium topic be made known to him at this time. The deadline for submission of papers for the meeting will be October 31, 1970.

Mr. Bednarczyk reported that a new projection screen would be needed for future lecture meetings, because the old screen had been on loan to us from a local company, and had been returned to them. A motion was made that the Section purchase a new screen of the appropriate size for use at the monthly meetings. The motion was seconded and passed.

The meeting was adjourned at 11:30 P. M.

Respectfully submitted,
HERBERT S. AARON,
Secretary

These minutes are uncorrected, and are published for informational purposes only pending their acceptance at the next meeting of the Executive Committee.

ACS 50-YEAR MEMBERS HONORED

This year 174 members of ACS are celebrating their 50th year of belonging to the Society. Three such members are from our local section:

Dr. F. M. Hildebrandt
Chestertown, Md.
Mr. Cecil O. Riggs
Baltimore, Md.
Dr. Thomas H. Swan
Baltimore, Md.

Each of the 50-year members is being honored with a certificate, special pin, and a badge which entitles him to free registration for all national and regional meetings.

COPY DEADLINE

Copy for the *Chesapeake Chemist* should be forwarded to the Editor not later than the tenth of the month preceding publication.

The best way to measure pH?

It all depends on how you look at it.

Perhaps you place portability first in a pH meter. Look no further than our Model PBL, with its rugged case, taut-band meter, solid-state circuitry. Reads accurately to ± 0.1 pH. Battery-operated, of course. Or plug it into an AC power source. Recorder output, Karl Fischer titration, and much more. A lot more than you'd expect in a portable meter priced at \$230.

Maybe you'd like portability plus an expanded scale. Then you'd like the PBX. Full-scale expansion of as little as 0.7 pH. Accuracy, ± 0.005 pH. Ready, too, for measurement of e.m.f. and activities of mono- or divalent ions. Ideal for determining specific-ion pollutants in streams and waterways. Battery-operated or AC-powered. Full-range adaptability. The PBX. The price — \$375.

Are accuracy, sensitivity, and a large scale important to you? Consider our Model LS — the "laboratory standard." Accurate to ± 0.05 pH (with a repeatability of ± 0.01 pH). Ultra-stable solid-state circuitry. Big, easy-to-read scale at just the right angle. With buffer adjust, Karl Fischer polarizing output, manual or optional automatic temperature compensation, recorder output. The LS, priced at \$355.

You might be looking for accuracy and sensitivity and a large, expanded scale. Our Model LSX fills the bill. Accurate to ± 0.005 pH in full-scale expansion of 0.7 pH unit. Which you read on a 7½-inch scale. High-precision measurements of pH, e.m.f., and mono- or divalent ion activities. Maximum sensitivity and stabil-

ity. High input impedance. A variety of built-in input/output adapters. The name: LSX. The price: \$425.

Won't settle for anything less than direct, digital display? You and our Model DR should find each other. It has a digital counter (plus a graduated scale) for continuous measurements to 0.001 pH. Accurate to ± 0.01 pH. Accommodates all electrodes. Lets you use manual or automatic temperature compensation. Solid-state circuitry to keep things trouble-free. The price? \$600.

Or true-electronic, digital, direct reading may be your idea of perfection. Realized in our Model NX. Big, bright, luminescent numerals. No more parallax errors or interpolations. Readable to four significant figures (the decimal point is always in the right place, automatically). Responds instantly to rapidly changing inputs. With long-life display tubes, plug-in circuit boards, and a price of \$595.

Look over the many faces of pH measurement with the help of your Sargent-Welch representative. Then arrange for a demonstration. Or write to us for details.
